Hello Brad – Thanks for helping provide some additional perspective on the operation of the facility. I wasn't sure exactly who to share this with but wanted to pass along the document we were thinking of this morning.

As NDEE continues it's discussions with the facility it would be helpful if the facility could provide some clarity regarding this to help assure no wet cake is being redirected to the feed lot currently. If they think they may plan to convert to more straight corn where this would be an option, I think we'd be interested to know what steps they would take to assure that any remaining pesticide residues in the equipment could be appropriately addressed in order to prevent contamination of byproduct destined for feed.

Thanks again for your insights.

Jamie
